EXPERIENCE

Noteefy

Remote

Junior Software Engineer

May 2026 – Present

- Closed 100+ Linear issues in three months across feature development, third-party API integrations, production debugging, and customer escalations on a React/TypeScript, Python, MongoDB, and Docker stack.
- Shipped a refund tracking dashboard end to end — scoped, implemented, validated, and released it across the frontend, backend reporting queries, and automated email delivery.
- Drove a multi-quarter admin dashboard consolidation: authored the migration and rollout plan, shipped the foundational enablement layer, and mapped the cross-team blast radius of removing a shared UI dependency before writing code.
- Integrated 15+ clients with five third-party booking platform APIs (Lightspeed, ForeUp, CPS, Club Prophet, Club Caddie), executing integration swaps and customer-specific configuration with no downtime.
- Became the team's first responder for automated crawler and monitor alerts, debugging live API and web-scraping failures across 6+ integrations using production MongoDB queries, Postman, and log tracing.
- Built and documented reusable AI agent skills in Cursor — a scope-triage workflow that estimates engineering review burden and a bug-bash workflow — and shared them for team-wide adoption.
- Built custom frontend experiences beyond the standard product template (embedded calendar widgets, tiered access, multi-property landing pages, gated membership pages) while leading ~30 client onboardings and 30+ production launches.

Software Engineering Intern

June 2025 – May 2026

- Built and shipped features for two core products of an automated demand and notification platform used by 800+ businesses and thousands of end users, on a React frontend with a Python/JavaScript backend, MongoDB, and Docker.
- Onboarded 100+ clients, cutting engineering setup time by ~1.5 hours each (150+ hours saved) and supporting \$1.3M+ in revenue by partnering with Sales and Customer Success.
- Diagnosed and resolved client-reported production issues, translating real-world feedback into shipped fixes; used Postman to design, test, and debug APIs and verify data flow between UI and services.

Muhlenberg Student Managed Investment Fund

Allentown, PA

Quantitative Researcher

September 2023 – Present

- Key member of a 34-person quantitative team that returned 27% and 25% in consecutive years, producing \$418,000 cumulative P&L from a \$600,000 capital base.
- Designed forecasting models and Python data pipelines for trading decisions; studied Bayesian statistics, machine learning, and option pricing in weekly technical lectures.

Finsiders

Remote

Digital Platforms Intern

March 2024 – May 2024

- Led development and relaunch of Finsiders.org end to end, presenting architecture and product demos to non-technical stakeholders.

PROJECTS

LeakGuard — Subscription Leak Detector | github.com/aloniewski2/subscription-saver

February 2026

- Built a privacy-first web app that analyzes bank statements entirely in-browser (zero backend) to detect recurring charges, duplicate services, and hidden price increases.
- Engineered a detection engine with 150+ merchant patterns, fuzzy matching, and recurrence heuristics, surfacing results in a 0–100 efficiency score and insights dashboard. React, TypeScript, Tailwind CSS, Recharts, PapaParse.

SolveIT AI | github.com/aloniewski2/solveit-ai-v1

October 2025

- Built a full-stack AI diagnosis app on React + TypeScript with Supabase Edge Functions (Deno), integrating Google Gemini for multimodal image/text analysis with confidence scoring and dynamic follow-up questions.
- Added real-time web crawling via the Firecrawl API for verified repair guides, plus native mobile features with Capacitor (camera, geolocation) for iOS/Android deployment.

DineValley | dinevalley-frontend.onrender.com

November 2025

- Built a restaurant recommendation app with a React + TypeScript frontend and Node.js/Express backend, integrating the Google Places API for real-time search, filtering, and geolocation results.
- Wrote custom filtering logic and backend endpoints that secure API keys, with CI/CD via GitHub Actions.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL, R, HTML, CSS

Frameworks & Libraries: React, Node.js, Express.js, Flask, FastAPI, Tailwind CSS, Vite, Ant Design, Pandas, NumPy

Tools & Platforms: Git/GitHub, Docker, MongoDB, MySQL, Postman, Redis, Snowflake, Linear, Cursor, Claude Code, GitHub Actions, Supabase, Azure, Figma

Practices: REST API design, third-party integrations, production debugging & on-call triage, code review, CI/CD

EDUCATION

Muhlenberg College — B.A., Computer Science & Finance (double major), GPA 3.7

Expected May 2027

- **Coursework:** Data Structures & Algorithms, Software Engineering, Database Systems, Web & Software Development, Cybersecurity, Statistical Analysis
- **NCAA Division III Wrestling:** Team Captain, 2025 NCAA Qualifier, 3× NWCA Scholar All-American, top-10 nationally ranked.
